ting performance.

PRICED LOW...FOR QUICK, HIGH VOLUME SALES...FULL MARK-UP...BIG PROFIT

Homecraftsmen from coast to coast have been asking dealers for a low priced, portable cutting tool that can perform a variety of tasks without breaking down or getting too hot to handle. The new Forsberg G-Whiz is the answer to this need and will be wanted by quality-minded homecraftsmen and professionals alike.

The G-Whiz has more sawing power than any other low priced saw on the market. **It is not a vibrator!** This dependable reciprocal-action saw cuts 2" finished lumber smoothly...quickly...without jumping or chattering.

Saws plastics, light metals, hard rubber, pressed woods, etc. Makes its own starting hole on inside cuts. Circles, curves, straight lines and intricate designs are a cinch.

Forsberg's rugged G-WHIZ is a man's tool . . . easy to handle, perfectly balanced . . . and safe enough for a boy to use. Does the work of a coping saw, jig saw, scroll, band and keyhole saw. Rips and cross-cuts fast. Dependable because it's manufactured with the same engineering skill that made the "original" Whiz-Saw America's first and foremost reciprocal action saw.
